

A second eye exam and new glasses for your child — at no additional premium cost, standard copays apply.

Your child's vision can change frequently during their school years, affecting academic and sports performance. That's why regular eye care is important.¹ Unfortunately, you may delay a second comprehensive eye exam during a plan year because of the cost.

To help ensure optimal eye health, UnitedHealthcare is expanding — at no additional premium cost, standard copays apply — its vision benefit for children up to age 13.

The Children's Eye Care Program now offers:

Coverage for a second eye exam each plan year at no additional premium cost, standard copays apply.

Coverage for a new pair of glasses (frames and lenses) at no additional premium cost if the vision prescription changes .5 diopter or greater in a plan year. Polycarbonate lenses for dependent children are also available at no additional cost. (A diopter is the unit used to measure the optical power of the lens an eye requires.) Standard copays apply.

Education about important children's eye health topics online.

Children need eye exams to help ensure healthy vision, but less than 15 percent of preschool children get an eye exam and less than 22 percent receive a vision screening.²

Enjoy added peace of mind knowing
your child's vision needs are covered.
